Clock

Pomodoro  
Timer

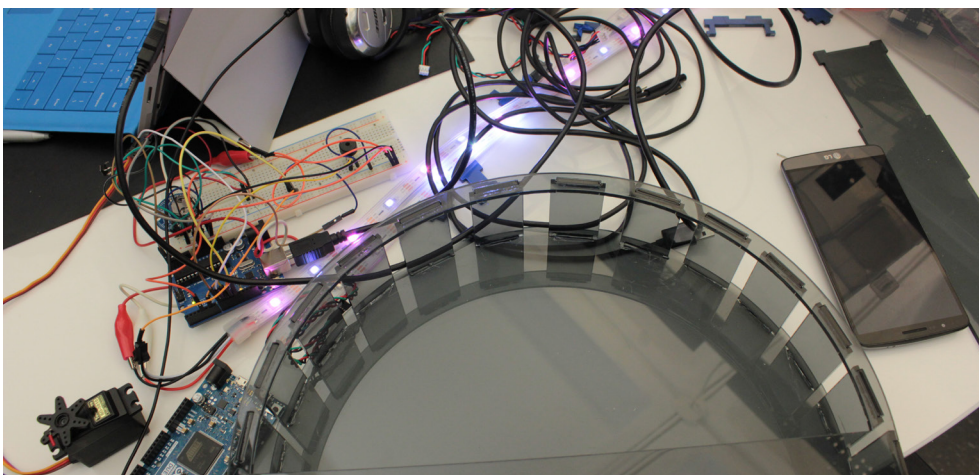

Wall Art

## CONCEPT

We didn't want our clock to simply display the time. We wanted to help people be productive while still allowing for aesthetic appeal. The idea is divide time into chunks. The clock represents an hour and as the time passes, the time gone by is blocked out thus allowing you to see how much time you have left. While this is happening, the colors of the clock change depending on the time of day mapped by the movement of the sun through the sky.

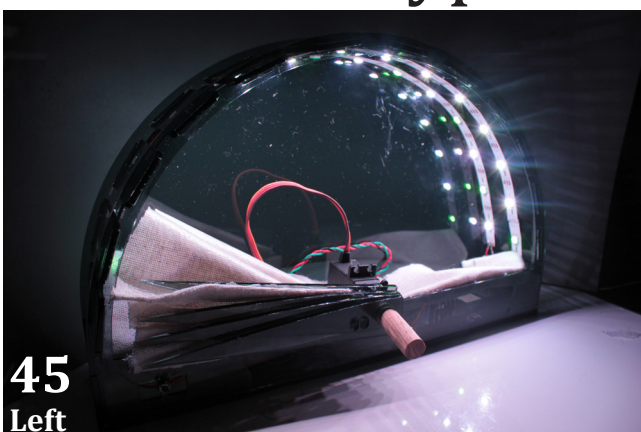

## Function

**Clock:** There is a different color for every hour of the day. The color depends on the color of the sky based on the position of the sun or moon. To set the time, hold the button for 4 seconds.

**Time left:** The closing of the fan helps you understand how much time you have left in an hour.

**Timer:** You can set the timer in increments of 15 or 30 minutes. Press the button once - sets to 15 minutes. Press again to set to 30 minutes. Press one more time to turn it off.
